Confirmation of Product Reliability – FTA20 Sliding Door Systems

We hereby confirm that our automatic sliding door system, the FTA20, in both single and bi-parting configurations, has been tested to 1 million cycles in accordance with the requirements of EN 16005.

Please note that previous statements of Declaration of Product Reliability were issued prior to the establishment of the EN 16005 standard. With the introduction of EN 16005, this declaration has been superseded. The EN 16005 not only includes the 1 million cycle endurance test but also introduces additional safety and performance requirements, all of which the FTA20 has successfully fulfilled.

Therefore, we confirm that the FTA20 meets the reliability and safety standards as defined by EN 16005, and remains a robust and dependable solution for automatic folding door applications.

Jerome Bally
