

The AI solution that saves energy right at the door

How the ecoLOGIC AI solution works

Analyses **customer flow, weather & temperature** data to ensure a balance between cost, energy savings & a welcoming atmosphere.

Optimises **door speed & hold-open time** in real time to reduce energy loss, allow fresh air in, & manage high foot traffic.

Cuts **energy use & costs** by **reducing heating & cooling demands**, while maintaining a stable indoor climate.

ecoLOGIC helps customers **save up to 14,000 kWh per store annually***—by cutting carbon footprints & supporting a greener future.

* for a medium sized retail store

Record Insight platform

ecoLOGIC, part of the Insight platform, enables real-time performance monitoring. Depending on your plan, facility managers can track energy savings, analyse trends, and adjust settings remotely—optimising entrances for maximum efficiency and cost savings.

Easy setup, immediate results

Expert technicians configure the system for each entrance, ensuring optimal setup & effortless integration with no disruptions. Once securely connected via a cellular gateway, the system runs automatically—continuously learning and adjusting to enhance long-term efficiency.

Compatible with

STA 20
Sliding Door

FTA 20
Folding Door

Third-Party Certified. Future-Ready.

Patent-pending technology and independent certifications from trusted third parties, including GreenCircle Certified and TÜV SÜD.
